

PROBLEM • One-size-fits-all teaching under high student-teacher ratios leaves individual gaps unnoticed. • Existing ed-tech is a static content library, not personalized to what a student needs next. • Students don't know which specific topics are weak until exam results arrive.	SOLUTION • Chat-based IVA detects intent and subject/topic entities from what a student types. • Dialog manager holds context and routes to the matching response, watsonx Assistant style. • Repeated confusion on a topic auto-escalates to a teacher; state persists between sessions.	UNIQUE VALUE PROPOSITION • A study assistant that talks with the student in plain language and knows when to hand off to a teacher. • Free, text-only, works on entry-level phones -- no app install, no heavy video streaming.	UNFAIR ADVANTAGE • Localized question banks co-built with regional teachers via the IBM SkillsBuild network. • Lightweight browser-based agent tuned for low bandwidth / low-end devices. • Growing per-student mastery data that keeps improving the agent's recommendations.	CUSTOMER SEGMENTS • Students, grades 6-10, in rural / Tier-2-3 towns. • Secondary: teachers wanting a supplementary practice tool. • Tertiary: NGOs / CSR education programs.
EXISTING ALTERNATIVES • Private tuition / coaching centres (costly, limited reach). • Generic YouTube/app content libraries. • One-to-many classroom teaching.	KEY METRICS • Weekly active learners. • Avg. mastery gain per topic / week. • % weak topics resolved within 2 weeks.	HIGH-LEVEL CONCEPT • A watsonx Assistant-style IVA, for school subjects.	CHANNELS • Schools, NGOs & govt. digital-education programs. • IBM SkillsBuild / CSR education partners. • Teacher referral, WhatsApp reminders.	EARLY ADOPTERS • Govt./NGO-run digital learning centres. • Tech-comfortable teachers piloting new tools. • Students already using a smartphone to study.

COST STRUCTURE • Content & question-bank development with partner teachers. • Hosting, storage and light infrastructure. • Teacher onboarding/training and minimal support staff.	REVENUE STREAMS • B2B2C licensing to schools / NGOs. • CSR & education-grant funding. • Freemium: free core practice, paid progress reports for parents/schools.
